Q1-

```
import java.io.*;
class mid {
    public static void (string [] args)
                throws IOException
    printer as = new Printwriter (" three.txt");

        Buffered feader br1 = new Buffered feader
        (new File feader (" one.txt"));
        Buffered feader br2 = new Buffered feader
        (new File feader (" two.txt"));
    String line 1 = br1. read Line ();
    String line 2 = br2. read line ();
    while (line 1 = null && line 2 != null).
    {

        as. print ln (line 1);
        as. print ln (line 2);
        line 1 = br 1. read line ();
        line 2 = br 2. read line ();
    }

        as. flush ();
        br 1. close ();
        as. close ();
        System. out. print ln. (" merged ");
    File feader pq = new File reader
        (" three.txt").
            int k = pq. read ();
        while (k != -1) {
```

```java
            System.out.print ((char) K);
         K = pqj.read();
      {
   }
}
```
